

WhatNext Vision Motors: Shaping the Future of Mobility with Innovation and Excellence

1. Introduction

The automotive industry is rapidly evolving, and traditional vehicle sales systems are often inefficient due to manual processes. Delays in dealer assignment, inventory mismanagement, and lack of customer engagement affect both dealers and buyers.

This project, *WhatNext Vision Motors*, is developed using Salesforce to provide a smart vehicle order management solution. The system automates dealer allocation, tracks vehicle inventory in real time, and enhances customer engagement through automated notifications, reports, and dashboards.

2. Objective

- To develop a smart automotive CRM system
 - To manage customers, dealers, and vehicles efficiently
 - To automate dealer assignment based on location
 - To prevent incorrect order or inventory entries using validation
 - To generate reports and dashboards for management insights
-

3. User Story

Customers often face delays in booking vehicles because of manual dealer assignment and poor communication. Dealers struggle to manage inventory, track orders, and coordinate with customers.

WhatNext Vision Motors provides a centralized platform where customers can book vehicles, schedule test drives, and track orders. Dealers can monitor inventory and manage orders efficiently, while the system ensures automatic dealer allocation and timely notifications.

4. System Modules

4.1 Customer Module

Stores customer details such as name, contact information, and location.

4.2 Vehicle Module

Maintains vehicle information including model, specifications, price, and availability.

4.3 Dealer Module

Stores dealer details including name, location, and assigned vehicles.

4.4 Inventory Module

Tracks vehicle stock and updates inventory in real time.

4.5 Order Module

Manages bookings, order status, and history.

4.6 Test Drive Module

Schedules and manages customer test drives.

4.7 Notification Module

Sends automated notifications and updates to customers and dealers.

5. System Architecture

The system is implemented using Salesforce CRM and includes:

- Custom Objects
 - Lookup Relationships
 - Validation Rules
 - Flow Automation
 - Apex Triggers (optional)
 - Reports and Dashboards
-

6. Project Development Steps

1. Created Salesforce Lightning App
 2. Developed Custom Objects (Customer, Vehicle, Dealer, Inventory, Order, Test Drive)
 3. Defined Relationships between objects
 4. Created Tabs and Navigation
 5. Designed Page Layouts
 6. Implemented Validation Rules
 7. Developed Flows for automation
 8. Created Reports and Dashboard
 9. Performed Testing
-

7. Validation Rule

A validation rule is implemented to prevent invalid order quantity.

Formula:

Quantity__c <= 0

Error Message:

"Quantity must be greater than zero."

8. Flow Automation

A record-triggered flow is created on the Order object to:

- Automatically assign dealer based on customer location
 - Check vehicle availability in inventory
 - Update inventory after order confirmation
 - Send notifications to customers and dealers
-

9. Reports and Dashboard

Reports Created:

- Vehicle Sales Report
- Inventory Report
- Order Status Report

Dashboard Components:

- Sales Overview (Bar Chart)
 - Inventory Distribution (Pie Chart)
 - Orders by Status (Donut Chart)
-

10. Testing

Test Cases:

1. Add vehicle → Successful
 2. Invalid quantity → Error displayed
 3. Dealer auto-assignment → Works correctly
 4. Test drive scheduling → Works smoothly
 5. Dashboard → Displays correct data
-

11. Advantages

- Reduces manual work

- Improves operational efficiency
 - Enhances customer satisfaction
 - Provides real-time inventory tracking
 - Supports data-driven decision-making
-

12. Limitations

- Requires internet connectivity
 - Dependent on Salesforce platform
 - Limited customization without advanced coding
-

13. Future Enhancements

- AI-based vehicle recommendations
 - Mobile application integration
 - Real-time vehicle delivery tracking
 - Advanced sales and inventory analytics
-

14. Team Structure and Work Distribution

Team Name

Velocity Innovators

Team Members

- Bhuvaneshwar D
- Zerubbabel S
- Vijayalakshmi V
- Fairaja Begum J

Work Distribution

Bhuvaneshwar D – Development & Documentation

- Created custom objects and relationships
- Implemented validation rules and flow
- Prepared project documentation

Zerubbabel S – UI Design

- Developed Lightning App interface

- Configured navigation and tabs
- Designed page layouts

Vijayalakshmi V – Reports & Dashboard

- Created reports
- Applied grouping and filters
- Designed dashboard components

Fairoja Begum J – Testing & GitHub

- Performed testing and validation
- Verified system functionality
- Managed GitHub repository

15. Conclusion

The WhatNext Vision Motors system demonstrates how Salesforce can improve efficiency, accuracy, and customer experience in the automotive sector. Automation reduces manual errors, while reports and dashboards provide actionable insights for better decision-making.
